Alessandro Volta: Battery maker

Alessandro Giuseppe Antonio Anastasio Volta was born in Como, Northern Italy in 1745. He lived with his parents, Filippo and Maddalena.

In 1774, Volta was appointed Director of the Royal School in Como. The following year he became Professor of Physics.

In 1776, while visiting local swamps, Volta observed a mystery gas known then as 'swamp gas', which was used to light gas lanterns. Volta was the first person to isolate methane from 'swamp gas'.

In 1780, however, he decided to become a physicist.

Volta did not talk until he was four years old. By the time he turned 14, he began to study electricity and published two books of his ideas.

In 1778, he was appointed Professor of Physics at the University of Pavia, a position he held for more than 40 years.
